This basic source for identification of U.S. manufacturers is arranged by product in a large multi-volume set. Includes: Products & services, Company profiles and Catalog file.

Before choosing sheet metal or suspension components, a motorcycle builder must first make critical frame decisions. Whether the rider opts for hard-tail, soft-tail, or twin shock, the choice affects the bike's cost, appearance, and use. In his third and final book on building V-twin motorcycles, author Tim Remus discusses the pros and cons of various frame designs, the right frame for the reader's use and budget, and the best equipment for the type of frame chosen. Photos illustrate the latest offerings from the aftermarket and how builders are using and equipping the latest frame designs. Chapters address topics such as frame design and construction material, triple trees and fork tubes, shock absorbers, brake components, wheels and tires, and motorcycle electronics. Hands-on sections teach the reader about drive-train alignment, squaring the frame, and going from a bare frame to a rolling chassis with an installed engine.

Vols. for 1970-71 includes manufacturers catalogs.
