206 Bones is a decent book but not Kathy Reichs' best. You aren't even half way through and you know who the "bad guys" are. The mystery seems to wrap it self up without much help from Detective Ryan or Dr. Brennan.

206 Bones is an anthology of poems and selected artwork by British writer Nina Bhadreshwar based on a chronicle of grieving and a love/hate relationship with California. As a child, art and poetry were her first creative endeavours; as a young woman, poetry and graffiti art formed the basis of her magazine. The Real State, formed in 1992 which catalyzed an adventure of grace that continues. The ghettos and injustices of Cali were my calling then and still are. I have tried to grow out of it but, the older I get, the deeper the roots grow. A newborn baby has 242 bones; a fully grown adult has 206. 206 Bones is about my coming of age and about all the breaks and scars which made this body. It's also about me being a part of California and it being a part of me. I was born in Britain but I was made in California.

Describes the human body in terms of the amount of things it has, such as 206 bones, more than 230 joints, and nine pounds of skin.

<div><div><div><div><div><div></div></div></div><div>There are 206 bones in the human body. Forensic anthropologists know them intimately, can read in them stories of brief or long lives, and use them to reconstruct every kind of violent end. The twelfth Temperance Brennan novel from Kathy Reichs, 206 Bones opens with Tempe regaining consciousness and discovering that she is in some kind of very small, very dark, very cold enclosed space. She is bound, hands to feet. Is she buried alive? In a cell? Who wants Tempe dead, or at least out of the way, and why? Tempe begins slowly to reconstruct... Tempe and Lieutenant Ryan had accompanied the recently discovered remains of a missing heiress from Montreal to the Chicago morgue. Suddenly, Tempe was accused of mishandling the autopsy—and the case. Someone made an incriminating phone call. Within hours, the one man with information about the call was dead. Back in Montreal, the corpse of a second elderly woman was found in the woods, and then a third. Seamlessly weaving between Tempe's present-tense terror and her memory of the cases of these murdered women, Reichs conveys the incredible devastation that would occur if a forensic colleague sabotaged work in the lab. The chemistry between Tempe and Ryan intensifies as this complex, riveting tale unfolds. With a popular series on FOX—now in its fifth season and in full syndication—Kathy Reichs is firmly established as a dominant talent in forensic mystery writing. Her signature blend of forensic descriptions that “chill to the bone” (Entertainment Weekly) and intense suspense have made her a number one New York Times bestseller and worldwide phenomenon.</div></div></div></div>

Text and illustrations, including xrays, provide a guided tour of the human skeleton, encouraging the reader to find and feel each bone as it is described.

From bestselling author Kathy Reichs comes a book set in Charleston, South Carolina, the center of a lucrative, clandestine, sophisticated trade in body parts—the kind that leaves the donor dead. Summoned to South Carolina to fill in for a negligent colleague, Tempe is stuck teaching a lackluster archaeology field school in the ruins of a Native American burial ground on the Charleston shore. But when Tempe stumbles upon a fresh skeleton among the ancient bones, her old friend Emma Rousseau, the local coroner, persuades her to stay on and help with the investigation. When Emma reveals a disturbing secret, it becomes more important than ever for Tempe to help her friend close the case. The body count begins to climb. An unidentified man is found hanging from a tree deep in the woods. Another corpse shows up in a barrel. There are mysterious nicks on bones in several bodies, and signs of strangulation. Tempe follows the trail to a free street clinic with a belligerent staff, a suspicious doctor, and a donor who is a charismatic televangelist. Clues abound in the most unlikely places as Tempe uses her unique knowledge and skills to build her case, even as the local sheriff remains dubious and her own life is threatened. Tempe's love life is also complicated. Ryan, her current flame, has come down to visit her from Montreal, and Pete, her former husband, is investigating the disappearance of a local woman—and he and Tempe are staying in the same borrowed beach house. Ryan and Pete compete for her attentions, and Tempe finds herself more distracted by her feelings for both men than she expected. Break No Bones is a smart, taut thriller featuring the kind of high-stakes crime that makes the headlines every week. Reichs, the inspiration for the hit Fox TV show Bones, is writing at the top of her form, and Tempe has never been more compelling.

A complex and riveting tale of deceit and murder unfolds in this repackaged of the thirteenth thrilling novel in Reichs's "cleverly plotted and expertly maintained series" (The New York Times Book Review). John Lowery was declared dead in 1968—the victim of a Huey crash in Vietnam, his body buried long ago in North Carolina. Four decades later, Temperance Brennan is called to the scene of a drowning in Hemmingford, Quebec. The victim appears to have died while in the midst of a bizarre sexual practice. The corpse is later identified as John Lowery. But how could Lowery have died twice, and how did an American soldier end up in Canada? Tempe sets off for the answer, exhuming Lowery's grave in North Carolina and taking the remains to Hawaii for reanalysis—to the headquarters of JPAC, the U.S. military's Joint POW/MIA Accounting Command, which strives to recover Americans who have died in past conflicts. In Hawaii, Tempe is joined by her colleague and ex-lover Detective Andrew Ryan (how "ex" is he?) and by her daughter, who is recovering from her own tragic loss. Soon another set of remains is located, with Lowery's dog tags tangled among them. Three bodies—all identified as Lowery. And then Tempe is contacted by Hadley Perry, Honolulu's flamboyant medical examiner, who needs help identifying the remains of an adolescent boy found offshore. Was he the victim of a shark attack? Or something much more sinister?
