Elections are random events. From individuals deciding whether to vote, to people deciding for whom to vote, to election authorities deciding what to count, the outcomes of competitive democratic elections are rarely known until election day...or beyond. Understanding Elections through Statistics: Polling, Prediction, and Testing explores this random phenomenon from two points of view: predicting the election outcome using opinion polls and testing the election outcome using government-reported data. Written for those with only a brief introduction to statistics, this book takes you on a statistical journey from how polls are taken to how they can—and should—be used to estimate current popular opinion. Once an understanding of the election process is built, we turn toward testing elections for evidence of unfairness. While holding elections has become the de facto proof of government legitimacy, those electoral processes may hide a dirty little secret of the government illicitly ensuring a favorable election outcome. This book includes these features designed to make your statistical journey more enjoyable: Vignettes of elections, including maps, to provide concrete bases for the material In-chapter cues to help one avoid the heavy math—or to focus on it End-of-chapter problems designed to review and extend that which was covered in the chapter Many opportunities to turn the power of the R statistical environment to the enclosed election data files, as well as to those you find interesting From these features, it is clear the audience for this book is quite diverse. This text provides mathematics for those interested in mathematics, but also offers detours for those who just want a good read and a deeper understanding of elections. Author Ole J. Forsberg holds PhDs in both political science and statistics. He currently teaches mathematics and statistics in the Department of Mathematics at Knox College in Galesburg, IL.

'Anybody But Anne' is the fifth in the 'Fleming Stone' series of detective novels by prolific author Carolyn Wells. Wealthy David Van Wyck has decided to become a philanthropist and leave his entire vast fortune to the local community. Whilst a noble intention, his family are opposed to the notion as it would leave them penniless. Following a meeting to certify his intentions, David is found dead in a locked room. His beautiful wife Anne is the obvious suspect, but there are many others who would have reason to want David out of the picture. A thrilling whodunnit from the popular author. Carolyn Wells (1862-1942) was a prolific American novelist and poet, best known for her children's literature, mystery novels and humorous verse. Following school in New Jersey, Wells worked as a librarian, where she developed her love of reading. It was during 1896 that Wells' first book 'At the Sign of the Sphinx' was published. From 1900 she dedicated herself to her literary career, writing over 170 novels in total across a range of genres. Some of her most loved works include the 'Patty Fairfield' and 'Marjorie Maynard' series for girls, as well as the 'Fleming Stone' mystery series for adults. Wells is also well-known for her humorous nonsense verse, and was a frequent contributor of verse to magazines. She published an autobiography 'The Rest of my Life' in 1937. Wells died in New York City in 1942.

This brand new edition of Wolf's acclaimed work provides a self-contained, short course in essential library skills for patrons of college, high school and public libraries. The intent is to provide a quick and easy way to learn to do library research. The exercises contained herein give students hands-on experience by applying rules stated in the text to situations that approach real "research problems." Subjects addressed include a brief tour of the library; card catalogs and cataloging systems; filing rules; online public access catalogs; subject searching; bibliographies; book reviews and parts of a book; dictionaries; encyclopedias; handbooks; atlases; gazetteers; periodicals; newspapers; online database searching and reference sources; literature and criticism; e-books; government information and government documents; biographies; business, career and consumer information; non-print materials and special services; online computer use in libraries and schools; and hints for writing term papers. Instructors considering this book for use in a course may request an examination copy here.

Widely used in law schools, the first edition of Starting Off Right in Law School prepared new law students to excel in doctrinal courses. The second edition has been updated to prepare students both for the broader demands of doctrinal courses and for the more distinct reading and writing demands of legal writing courses. Equipped with many example cases, the book helps new law students determine which details of the case are important for doctrinal courses and which are more pertinent to legal writing courses; it also teaches students how to adapt their writing style to the requirements of each course. Chapters describe what different types of lawyers do, how they interact with clients and in courtrooms, and how students can effectively read cases, outline, and apply what they have learned on the exams. This book is the perfect tool for pre-law students to read on their own or for law school orientation required reading.

Vols. 8-10 of the 1965-1984 master cumulation constitute a title index.

Your training: Do they live it or just love it? How do training professionals show the impact their programs are making? Positive feedback only goes so far in confirming success. And entertainment value, while important, isn't the truest measure of your effectiveness. To find out whether your participants are applying what they've learned on the job, you need a good evaluation strategy—one that connects evaluation to performance, program design, and bottom-line value. Each chapter of Evaluation Basics focuses on a critical aspect of developing and implementing an evaluation plan for a face-to-face or virtual training program. You'll not only delve into Kirkpatrick's four levels of evaluation and the methods and instruments you can use, but you'll also get help effectively communicating results. Part of ATD's Training Basics series, the second edition of Evaluation Basics offers practical examples, worksheets, and new case studies to further your understanding.

Essential quick reference guide for material covered in a college-level introductory statistics course. Often one of the most challenging intro courses taken, the information as authored in its concise style and format can support anyone using statistics for reference to concepts and equations throughout their academic or professional career. In 6 laminated durable pages the answers you need are at your fingertips organized and authored by Deborah J. Rumsey, PhD, accomplished author, Statistics Education Specialist, Faculty Member, and Fellow of the American Statistical Association. Quality and care of authorship, editing and design, and that this guide will last your entire career makes it an incredible value that you need to add to your statistics toolbox. 6 page laminated guide includes: Important Terms Data Tables Graphs for Single Variable Pie Chart, Bar Graph, Histogram, Stem-Leaf Plot, Boxplot Descriptive Statistics for Single Variable Measures of Center Quartiles & Percentiles Five-Number Summary Measures of Variation Correlation & Regression Correlation Simple Linear Regression Simple Linear Regression Analysis Interpretation & Prediction Measuring Probability Random Variables Probability Distribution Normal Distribution 68-95-99.7 Rule Standard Normal Distribution The t-Distribution Binomial Distribution Sampling Distribution of the Sample Mean Sampling Distribution of the Sample Proportion Confidence Intervals Alpha Level Hypothesis Test
