Doing this gives, $z = f(1, y) = 10 ? 4 (1) 2 ? y 2 ? z = 6 ? y 2 z = f(1, y) = 10 ? 4 (1) 2 ? y 2 ? z = 6 ? y 2$. and this will be graphed in the plane given by $x = 1$ $x = 1$.

The new early transcendentals version presents the logarithmic, exponential and other transcendental functions before the definite integral so these topics can be taught early in the course. This organization allows the authors to provide interesting applications which include transcendental functions in the material on applications of the derivative, integration and applications of the integral. The latest edition incorporates modern technology and recent trends without sacrificing the acknowledged strengths of previous versions. Contains over 1300 new problems as well as more illustrations. Fresh technology-based examples support numerous exercises requiring the use of a graphics calculator or other graphing software.

Practice calculus with this solutions manual For students using Calculus: One and Several Variables for classroom instruction, this complete solutions manual for chapters 1-12 provides the answer key to the one-variable problems presented in the text. Now in its tenth edition, Calculus: One and Several Variables has become known for its easy-to-understand writing style and balance of theory and application. With this solutions manual, students can apply their knowledge using the problems presented in the first 12 chapters and check their work as they go.
