This work provides a new, comprehensive update to the Arizona State University Dental Anthropology System (ASUDAS). Drawing upon her extensive experience in informatics, curating data, and dental morphological data acquisition, Edgar has developed accessible and user-friendly standardized images and descriptions of dental morphological variants. The manual provides nearly 400 illustrations that indicate ideal

expressions of each dental trait. These drawings are coupled with over 650 photographs of real teeth, indicating real-world examples of each expression. Additionally, trait descriptions have been written to be clear, comparative, and easy to apply. Together, the images and descriptions are presented in a standardized form for quick and clear reference. All of these modifications to ASUDAS make it more usable for students and professionals alike. In addition to these features of the manual, the text makes a brief but strong argument for why dental morphology will continue to be a useful tool in biological anthropology through the 21st century.

This guide to scoring crown and root traits in human dentitions substantially builds on a seminal 1991 work by

Turner, Nichol, and Scott. It provides detailed descriptions and multiple illustrations of each crown and root trait to help guide researchers to make consistent observations on trait expression, greatly reducing observer error. The book also reflects exciting new developments driven by technology that have significant ramifications for dental anthropology, particularly the recent development of a web-based application that computes the probability that an individual belongs to a particular genogeographic grouping based on combinations of crown and root traits; as such, the utility of these variables is expanded to forensic anthropology. This book is ideal for researchers and graduate students in the fields of dental, physical, and forensic anthropology and will serve as a
