Selected by a team of top women historians from across the nation & the editors of Ladies' Home Journal, the women in this book helped bring about a major transformation in the role of women in the 20th century. Narrowing the choice down to just 100 names was a daunting task. But some names practically suggested themselves: Eleanor Roosevelt, Rachel Carson, Betty Friedan, Margaret Sanger, Mary McLeon Bethune, & Gloria Steinem. Not everyone will agree with every choice made for this book, but these women will influence our lives for untold years to come. They

The authors study imaginary representations of the Khovanov–Lauda–Rouquier algebras of affine Lie type. Irreducible modules for such algebras arise as simple heads of standard modules. In order to define standard modules one needs to have a cuspidal system for a fixed convex preorder. A cuspidal system consists of irreducible cuspidal

modules—one for each real positive root for the corresponding affine root system  $X$ , as well as irreducible imaginary modules—one for each  $\lambda$ -multiplication. The authors study imaginary modules by means of “imaginary Schur-Weyl duality” and introduce an imaginary analogue of tensor space and the imaginary Schur algebra. They construct a projective generator for the imaginary Schur algebra, which yields a Morita equivalence between the imaginary and the classical Schur algebra, and construct imaginary analogues of Gelfand–Graev representations, Ringel

An overview of the role played by federalism in anti-poverty policy and in poverty law.

Citizenship is invaluable, yet our status as citizens is always at risk—even for those born on US soil. Over the last two centuries, the US government has revoked citizenship to cast out its unwanted, suppress dissent, and deny civil rights to all considered “un-

American"—whether due to their race, ethnicity, marriage partner, or beliefs. Drawing on the narratives of those who have struggled to be treated as full members of "We the People," law professor Amanda Frost exposes a hidden history of discrimination and xenophobia that continues to this day. The Supreme Court's rejection of Black citizenship in Dred Scott was among the first and most notorious examples of citizenship stripping, but the phenomenon did not end there. Women who married noncitizens, persecuted racial groups, labor

leaders, and political activists were all denied their citizenship, and sometimes deported, by a government that wanted to redefine the meaning of "American." Today, US citizens living near the southern border are regularly denied passports, thousands are detained and deported by mistake, and the Trump administration is investigating the citizenship of 700,000 naturalized citizens. Even elected leaders such as Barack Obama and Kamala Harris are not immune from false claims that they are not citizens eligible to hold office. You Are Not

American grapples with what it means to be American and the issues surrounding membership, identity, belonging, and exclusion that still occupy and divide the nation in the twenty-first century.

Service and maintenance procedures for walk behind mowers.

The second edition of the book begins with the description of the diversity of wine-related microorganisms, followed by an outline of their primary and energy metabolism. Subsequently, important aspects of the secondary

metabolism are dealt with, since these activities have an impact on wine quality and off-flavour formation. Then chapters about stimulating and inhibitory growth factors follow. This knowledge is helpful for the growth management of different microbial species. The next chapters focus on the application of the consolidated findings of molecular biology and regulation the functioning of regulatory cellular networks, leading to a better understanding of the phenotypic behaviour of the microbes in general and especially of the starter cultures as well as of

stimulatory and inhibitory cell-cell interactions during wine making. In the last part of the book, a compilation of modern methods complete the understanding of microbial processes during the conversion of must to wine. This broad range of topics about the biology of the microbes involved in the vinification process could be provided in one book only because of the input of many experts from different wine-growing countries.

An all-new Star Trek technical manual of the legendary Klingon Bird of Prey, presented in the world-

renowned Haynes Manual format! The Bird-of-Prey is the classic Klingon starship—a tough raiding and scouting vessel that has served at the heart of the Klingon Defense Force for more than a hundred years. Life on board is harsh and brutal, with any sign of weakness leading to a challenge to the death. The ship itself is stripped back and lean, with everything designed for a single purpose—war. This Haynes Manual traces the origins of a Bird-of-Prey from the moment it is commissioned by one of the Great Houses and constructed at the shipyards of the Klingon Naval

Academy. It then proceeds to examine General Martok's famous ship the I.K.S. Rotarran in unprecedented detail. Featuring a stunning cutaway drawing and, for the first time ever, detailed deck plans and incredible new computer-generated artwork, the Haynes Bird-of-Prey Manual is a technical tour of the ship's systems, from the bridge and engineering rooms to the disruptors, torpedo launcher, and the all-important cloaking device. In addition, the Manual provides a unique insight into life on board a Klingon ship and the Rotarran's glorious history in the

Dominion War. This Haynes Manual is fully authorized by CBS. All the new artwork has been designed by STAR TREK: THE NEXT GENERATION and STAR TREK: VOYAGER's senior illustrator Rick Sternbach, who is the world's leading expert on STAR TREK technology, with CG renders produced by STAR TREK VFX artist Adam 'Mojo' Lebowitz.

Fascia is currently the hot topic among manual therapists of all persuasions. All are anxious to improve their understanding of its anatomy and dysfunction. This is the first book to explain and

illustrate fascial anatomy relating it specifically to manual therapy techniques by demonstrating what effect such techniques have on body structures. The author describes in detail the technique of myofascial induction. The text is supported by over 500 spectacular full colour photographs as well as nearly 200 line drawings. In addition to the highly illustrated text there is a DVD containing video clips demonstrating the application of the techniques to dissections of fresh cadavers and showing how the tissues move in response to the
