The report describes key features of ADB's operations in India and how these have evolved to support the Government of India's focus on high, inclusive and sustainable growth. As of December 2012, the Asian Development Bank (ADB) had approved 168 sovereign loans amounting to \$27.2 billion and 344 technical assistance projects amounting to \$258 million on a cumulative basis for India. Today, ADB operations cover over 20 states in India. While infrastructure

projects in the energy, transport, and urban sectors comprise over 75% of ADB's operations in the country, ADB is also engaged in promoting water resources management, agribusiness infrastructure development, financial inclusion, skills development, and regional cooperation and integration. The report provides a compendium of ongoing projects and case studies across ADB's sectors of operations in India. It also highlights the innovative elements of projects and showcases the impact of development assistance on people's lives and livelihoods.

Laws relating to water in India have diverse origins, including ancient local customs and the British Common Law. The in-depth chapters in this compendium, written by luminaries from various fields, pertain to issues on water and proceed to a discussion of the legal questions that arise. This volume thus straddles two domains, viz., (i) water-resource policy, management, conservation, conflict-resolution, etc., and (ii) water law. The book also briefly raises and explores the case for a constitutional declaration on water and an overarching national water law. The book is an invaluable resource for policy-makers, planners and administrators concerned with water at the Central, State and local levels; students, academics and practitioners in the domains of water as well as law; and social scientists, NGOs and activists concerned with the various issues discussed in the book. It should be useful as a main or supplementary textbook in universities and research or management institutions where any aspect of water (engineering, ecological, legal, social, economic, management or other) is a subject of study.

Cost-Effective Technologies for Solid Waste and Wastewater Treatment synthesizes methods, case studies, and analyses of various state-of-the-art techniques for removing contaminants from wastewater, solid waste, or sewage and converting or reusing the waste with minimum impact on the environment. Focusing on innovative treatment strategies, as well as recent modifications to conventional processes, the book covers methods for a complex variety of emerging pollutants including organic matter, chemicals, and micropollutants resulting from developmental and industrial activities. Serving as a practical guide to state-of-the-art methods, Cost-Effective Technologies for Solid Waste and Wastewater Treatment also delivers foundational information on the practical design of treatment and reuse systems and explains the treatments in terms of scale, efficiency, and effectiveness. It focuses on cost-effective technologies that are particularly applicable to environmental clean-up, such as bioaugmentation and biostimulation of plastics, activated carbon, phytoremediation, crude oil pollution stress, adsorbents, contaminants of emerging concern, anaerobic digestion, in situ chemical oxidation (ISCO), biosorption, bioremediation, radioactive contaminants, constructed wetlands, nanoremediation, and rainwater. As such, it is a valuable and practical resource for researchers, students, and managers in the fields of environmental science and engineering, as well as wastewater management, chemical engineering, and biotechnology.

- Presents low-cost treatment technologies for both solid waste and wastewater
- Analyzes the efficiency and effectiveness of state-of-the-art technologies
- Includes methods and case studies for practical application

October 2-3, 2017 Vienna, Austria Key Topics : Remote Sensing, GIS Techniques and Technologies, Geodynamics, GIS in renewable energy sources, GIS Market, Remote Sensing in Urban Environment, Geostatistics, Spatial Analysis With GIS, Seismology and Geodesy, Disaster assessment and management, Entrepreneurs Investment Meet, Global Navigation Satellite System (GNSS),

This book, divided in two volumes, originates from Techno-Societal 2020: the 3rd International Conference on Advanced Technologies for Societal Applications, Maharashtra, India, that brings together faculty members of various engineering colleges to solve Indian regional relevant problems under the guidance of eminent researchers from various reputed organizations. The focus of this volume is on technologies that help develop and improve society, in particular on issues such as advanced and sustainable technologies for manufacturing processes, environment, livelihood, rural employment, agriculture, energy, transport, sanitation, water, education. This conference aims to help innovators to share their best practices or products developed to solve specific local problems which in turn may help the other researchers to take inspiration to solve problems in their region. On the other hand, technologies proposed by expert researchers may find applications in different regions. This offers a multidisciplinary platform for researchers from a broad range of disciplines of Science, Engineering and Technology for reporting innovations at different levels.
